

Leading forward.

Parking guidance system

- Years of experience in producing and installing PVS's
- Good readability
- High sealing level
- Choice of flat signs or housings

Our Parking guidance system

Parking guidance systems (PGS) ensure a better flow of traffic. Motorists are being guided to a free parking facility via the most ideal route. The design of these systems can be done in a variety of ways. The lay-out, colour, scheme and the way of drafting (construction and confirmation) can be determined by our client. AGMI has installed systems such as these in over 50 municipalities.

Important advantages

- Years of experience in producing and installing PVS's
- Good readability – minimal dew formation
- High sealing level (comparable to IP65)
- Choice of flat signs or housings
- Low weight because of the use of aluminium
- Malfunction-free
- Electrical properties
- Power 230V
- Controllers – GPRS, Ethernet, RS 323, RS 485, RF and Wireless
- Displays: LED Full, Free X (default), LED Full, Free, X + 1888 in numbers, LED Matrix Red, Green, White or Amber, LED matrix full colour (RGB), LED matrix NEN 12966 RGW P10 160x160mm

Mechanical properties

- Basic material aluminium
- Class 3 retroreflective foil
- Temperature range -30°C to + 60°C

Quality and standards

- 12 months warranty
