

Leading forward.

Rotating lamellas

- Good readability, sign seams almost invisible
- Easy to use, the signs have a low weight
- Low energy consumption
- Maintenance-free due to the unique self-lubricating system

Our Rotating lamellas

Rotating lamellas can be subdivided in several compartments, each surface is provided with a motor and control panel. This offers the possibility to communicate several messages with a single rotating sign. Thanks to the unique self-steering system, the lamellas always operate smoothly and no maintenance is required.

Important advantages

- Good readability, sign seams almost invisible
- Easy to use, the signs have a low weight
- Low energy consumption
- Maintenance-free due to the unique self-lubricating system
- Use of high quality reflection materials
- The rotation panels are easy to replace
- Can be combined with ALISA

Electrical properties

- Control box provided with connection terminals and RP2000 unit
- Optional: Waterproof stainless steel and manual operation
- Connection voltage: 230VAC
- Power consumption:
 - - Sign with 1 motor: 25W
 - - Sign with 2 motors: 50W
 - - Sign with 1 motor and a control box (heating element): 50W
 - - Sign with 2 motors and a control box (heating element): 75W

Mechanical properties

- The base material is anodised aluminium
- Class 3 retroreflective foil
- Width dimension variable per mm
- Width dimension variable per slat of 104,9mm, 110mm or 116mm
- Height dimension variable per mm
- Temperature range -30°C to +60°C
