VICA mast arms

- Flexible
- The speed of delivery and placement
- Maintenance-free
- Cradle-to-Cradle certified
- Easy transport

Our VICA mast arms

VICA mast arms are easily applicable and can be extended from the masts length for up to 14 meters. In addition, you have an obstacle-free zone in the verge of the road; whereas portals do not offer this solution. This adds extra safety on the road. Both large and small blue road signs can be easily attached onto this particular mast. In many situations, mast arms are an ideal solution because of the flexibility, speed of delivery and costs.

Important advantages

- Flexible, the mast arm always fits because there is only one foundation and one upright needed in order to place it.
- The speed of delivery and placement, the foundation and construction are being produced at the same time. The placement of the mast arm happens in one go.
- Lower costs because the production and placement of the mast goes speedily.
- Easy transport: the constructions are delivered in parts
- Very long technical life-span, 50 years
- There are several foundation possibilities
 - - Retractable steel ground tubes (standard)
 - - A concrete foundation will be poured on location
 - - Prefabricated concrete foundation without stake
 - - Prefabricated concrete foundation with stake
 - - Stakes that are driven onsite and a concrete foundation will be poured over it

Mechanical properties

- Basic material superstructure is aluminium
- Basic material substructure is steel or concrete
- Dimensions and sections are tuned per location

Quality

- Technical lifespan of 50 years

Standards & guidelines

• NEN-EN 1990 (Algemeen) • NEN-EN 1991 (belastingen) • NEN-EN 1999 (constructief) • NEN-EN 1090-1 (vervaardiging) • NEN-EN 1090-3 (vervaardiging)
